

What is Enterprise Application Software?

Enterprise software, also known as enterprise application software, is software used in organizations and businesses. Services provided by enterprise software are typically business-oriented tools such as interactive product catalogue, automated billing systems, security, content management, IT service management, customer relationship management, resource planning, business intelligence, HR management, application integration, and forms automation.

MicroSale's tailored *Enterprise* solution is specially designed software that complements any MicroSale using restaurant. MicroSale's Enterprise delivers consistency throughout restaurants. MicroSale puts the power of design in your hands. Change the button layout screens, set prices, and manage inventory. Enterprise allows you to do more with less time and less money. Enterprise is perfect for large restaurant chains or individual stores looking to manage data. MicroSale's staff will keep an eye on your data to ensure that you get up to the minute reports and that everything is running efficiently.

MicroSale is a rising leader in the point of sale industry. It is a user friendly point of sale solution that is revolutionizing the way restaurants do business. Through market research and customer requests, programmers work continuously to add new features and improve current operations in the system.

Since 1989, the focus has been to "Keep It Simple" (KIS Software, Inc.) MicroSale provides intuitive screen layouts, flexible menu programming, timed pricing (such as pool tables/games), precise reporting/inventory control, online ordering, and powerful interface options. MicroSale is not a 'modular' POS system; most features are included in the regular package.

MicroSale has the ability to handle any size installation; it is easily scalable to meet the needs of any restaurateur. MicroSale is tailored for quick service, table service, pizzerias, hotels, bars, nightclubs, bowling centers, and entertainment centers.
